Batch :- 2021
CTC :- Depand on Role

Eligibility Criteria

· B.E/ B.Tech – CSE/IT/ECE/EEE,

Technical Job Roles

1. Software Development Engineer- Testing (SDET):

We are looking for a highly motivated, customer centric Software Development Engineer in Test (SDET) with a deep experience in testing methodologies and automation, who is enthusiastic about the new cutting edge technology offered to consumers. You should seize this opportunity if you have a passion for customer needs, a deep understanding of web applications and mobile apps and proven automation experience. Our systems need to meet remarkably high standards of quality, stability, performance and reliability, operating around the clock on a massive scale. Our SDETs are able to understand software internals, debug

problems using log files, write automated tests with Java and/or user-level automated tools, and fix issues to improve the customer experience. SDETs work with Software Development Engineers to understand features, technical implementation, and maintenance of the software products. They should also work with groups such as Product Management, User Interaction, and Customer Support to understand customer usage models and develop test plans and suites that approximate real-world environments and regression tests and driving the software development process towards quality-centric methodologies.

2. System Development Engineer:

Our team is seeking engineers with broad technical skills to help us optimize how we synthesize massive amounts of data and complex business rules into mission critical financial information. Participate in the design, development, implementation, testing and documentation of large-scale, multi-tiered, distributed software applications, tools, systems and services. Translate functional requirements into robust, scalable, supportable solutions that work well within the overall system architecture. Participate in the full development cycle, end-to-end, from design, implementation, and testing to documentation, delivery and maintenance. Produce comprehensive, usable software documentation. Evaluate and make decisions around the use of new or existing software products and tools. Along the way you'll gain and leverage a unique understanding of how Amazon.com works; from the numerous software systems that comprise the website's back-end, to the details of our business model, and the relationships we're establishing with an ever-growing network of selling partners who depend on Amazon.com to run their businesses. The ideal candidate will draw upon exemplary analytical, critical thinking, and problem solving skills, and a passion for maintaining highly reliable, distributed systems which operate 24/7/365. Successful members of this team collaborate effectively with internal end-users, aggressive cross-functional software development teams, and technical support/sustaining engineering teams to solve problems and deliver successfully against high operational standards of system availability and reliability. We look for engineers who are excellent communicators, self-motivated, flexible, hardworking, and who like to have fun!

3. Data Engineer:

Do you want to be in the forefront of engineering big data solutions that takes Transportation models to the next generation? Do you have a solid analytical thinking, metrics driven decision making and want to solve problems with solutions that will meet the growing worldwide need? As a Data Engineer working on the analytics platform, you will be implementing and supporting the analytic technologies that give our customers timely, flexible and structured access to their data. We are building real time analytical platforms using big data tools and AWS technologies like Hadoop, Spark, EMR, SNS, SQS, Lambda, Kinesis Firehose, DynamoDB Streams. You will be challenged with a variety of tasks, ranging from server administration to metadata modeling to UI design. You will interact with customers to gather requirements and structure solutions. Design, implement and drive adoption of new analytic technologies and solutions. Promote industry standard best practices. Interface with business customers, gathering requirements and gaining a deep-dive understanding of key datasets. The ideal candidate relishes working with large volumes of data, enjoys the challenge of highly complex technical contexts, and, above all else, is passionate about data and analytics. He/she is an expert with data modeling, ETL design and business intelligence tools and passionately partners with the business to identify strategic opportunities where improvements in data infrastructure creates out-sized business impact. He/she is a self-starter, comfortable with ambiguity, able to think big (while paying careful attention to detail), and enjoys working in a fast-paced and global

team. It's a big ask, and we're excited to talk to those up to the challenge!

1. Software Development Engineer- Testing (SDET): Stipend is 60,000/- Per Month
2. System Development Engineer: Stipend is 20,000/- Per Month
3. Data Engineer: Stipend is 20,000/- Per Month

1150000

Base Pay: Base pay is the fixed pay that is given to the employee during the 1st year of their employment
in 12 equal installments also called monthly salary. This also includes standard deductions as per the
guidelines of income tax and basis individual tax planning.

SB1: Sign-on Bonus Year 1 is the amount given to the employee in 12 equal installments along with their
monthly salary during their 1st year of employment and is part of their overall compensation for the 1st
year. Taxes are deducted in accordance with the income tax guidelines and individual tax planning.

SB2: Sign-on Bonus Year 2 is the amount given to the employee in 12 equal installments along with their
monthly salary during their 2nd year of employment and is part of their overall compensation for the 2nd
year. Taxes are deducted in accordance with the income tax guidelines and individual tax planning.

RSU: Restricted Stock Units is the total value of the stocks that an employee would get across 4 years.
Each year the schedule of RSU vesting differs and is as follows: 1st year - 5%, 2nd year - 15% and for 3rd
and 4th year, 20% of stocks vest every 6 months. At the time of vest, since you get actual Amazon stocks
as per your vesting schedule, there can be no fractional stock vests. Any fractional stocks on a particular
vest date are carried forward to the next vest date. The value of your RSUs is considered taxable income
and is governed by Tax laws in your country. You will have access to complete information related to taxes
on RSUs once you join Amazon Data Engineer- Intern Component Package (INR)
